

## PATENT

**Amendments to the Claims**

Following is a complete set of claims as amended with this Response. This complete set of claims excludes cancelled claims 7, 8, 10, 14-28 and includes amended claims 1, 4, 11, 29-33, 35, 36 and new claims 37-50

1. (Currently Amended) An implantable cardiac rhythm device comprising:  
a sensing circuit configured to sense physiological cardiac events;  
a pulse generator configured to deliver electrical stimulation energy to selected cardiac tissue upon the sensing of selected cardiac events, the pulse generator having storage capacitors that store the stimulation energy;  
a Lithium Pentoxide (LP) battery coupled to the storage capacitors, the LP battery providing a charging current to charge the storage capacitors to preselected energy level; and  
a supply battery, switchably connected in parallel to the LP battery, having characteristics that enable the supply battery to recharge the LP battery;  
a recharging circuit coupled to the LP battery and configured to deliver recharging current to the LP battery; and  
a controller programmed to enable the supply battery to recharge the LP battery when voltage across the LP battery falls below a predetermined minimum value.
2. (Original) The device of claim 1, wherein the LP battery is a Lithium Silver Vanadium Oxide (SVO) battery.
3. (Original) The device of claim 1, wherein the LP battery is recharged upon the detection of a predetermined number of deliveries of stimulation energy.

**BEST AVAILABLE COPY**

## PATENT

4. (Currently Amended) The device of claim 1, further comprising a LP battery voltage detector, operative to cause the LP battery to be recharged when the LP battery voltage is detected as being below ~~a predetermined threshold value~~ the predetermined minimum value.

5. (Original) The device of claim 1, further comprising a charging time interval detector configured to monitor the charging time interval required to charge the storage capacitor to the preselected energy level and operative to cause the LP battery to be recharged when the charging time interval is detected to exceed a preselected value.

6. (Original) The device of claim 1, wherein the LP battery has a maximum energy capacity and wherein the LP battery is recharged at a rate less than a predetermined maximum charging rate to prevent LP battery degradation.

7. (Cancelled)

8. (Cancelled)

9. (Withdrawn) The device of claim 1, wherein the recharging circuit includes a receiver coil adapted for magnetic coupling to an external transmitter coil, wherein the LP battery is recharged as a function of the energy transmitted by the external transmitter coil.

10. (Cancelled)

11. (Currently Amended) The device of claim 10 1, wherein the LP battery has a stored energy density and the supply battery has a stored energy density greater than that of the LP battery.

## PATENT

12. (Original) The device of claim 11, wherein the supply battery comprises a relatively high energy density battery.

13. (Original) The device of claim 11, wherein the supply battery comprises Lithium Carbon Monofluoride (CF<sub>x</sub>).

14-28. (Cancelled)

29. (Currently Amended) ~~The device of claim 28~~ An implantable cardiac rhythm management device comprising:  
a pulse generator adaptively configured to generate electric shocks for delivery to a patient's heart comprising:

at least one output capacitor;

charging circuitry capable of charging the at least one capacitor to produce high voltage shocks for delivery to a patient's heart;

a first battery switchably coupled to the charging circuitry, having the characteristic of a high current flow rate to fast charge the at least one capacitor;

a second battery, switchably connected in parallel to the first battery, having characteristics that enable the second battery to recharge the first battery;

a detector, coupled to the charging circuitry, that detects when the recharging current is above a predetermined threshold indicative of abnormal recharging of the first battery; and

a controller programmed to switchably enable the charging circuitry to produce the high voltage shocks, and to disable the second battery whenever an abnormal recharging current is detected;

wherein the controller is further programmed to enable the second battery to recharge the first battery when the voltage across the first battery falls below a predetermined minimum value.

## PATENT

30. (Currently Amended) The device of claim 28 ~~29~~ wherein the first battery has a battery end of life and the controller is programmed to enable the second battery to recharge the first battery prior to reaching the end of life thereof.

31. (Currently Amended) The device of claim 28 ~~29~~ wherein the first battery charges the at least one capacitor in a capacitor charge cycle and wherein the controller is programmed to recharge the first battery upon the occurrence of a predetermined number of capacitor charge cycles.

32. (Currently Amended) ~~The device of claim 28~~ An implantable cardiac rhythm management device comprising:  
a pulse generator adaptively configured to generate electric shocks for delivery to a patient's heart comprising:  
at least one output capacitor;  
charging circuitry capable of charging the at least one capacitor to produce high voltage shocks for delivery to a patient's heart;  
a first battery switchably coupled to the charging circuitry, having the characteristic of a high current flow rate to fast charge the at least one capacitor;  
a second battery, switchably connected in parallel to the first battery, having characteristics that enable the second battery to recharge the first battery;  
a detector, coupled to the charging circuitry, that detects when the recharging current is above a predetermined threshold indicative of abnormal recharging of the first battery; and  
a controller programmed to switchably enable the charging circuitry to produce the high voltage shocks, and to disable the second battery whenever an abnormal recharging current is detected;

## PATENT

wherein the capacitor charge cycle defines a charge cycle time, and  
wherein the controller is programmed to recharge the first battery when the a  
charge cycle time exceeds a preselected value.

33. (Currently Amended) The device of claim ~~28~~ 29 wherein the first battery comprises a Lithium Pentoxide cell.

34. (Original) The device of claim 33 wherein the Lithium Pentoxide cell comprises a Lithium Silver Vanadium Oxide (SVO) cell.

35. (Currently Amended) The device of claim ~~28~~ 29 wherein the second battery comprises a Lithium Carbon Monofluoride (CFx) cell.

36. (Currently Amended) ~~The device of claim 28~~ An implantable cardiac rhythm management device comprising:

a pulse generator adaptively configured to generate electric shocks for delivery to a patient's heart comprising:

at least one output capacitor;

charging circuitry capable of charging the at least one capacitor to produce high voltage shocks for delivery to a patient's heart;

a first battery switchably coupled to the charging circuitry, having the characteristic of a high current flow rate to fast charge the at least one capacitor;

a second battery, switchably connected in parallel to the first battery, having characteristics that enable the second battery to recharge the first battery;

a detector, coupled to the charging circuitry, that detects when the recharging current is above a predetermined threshold indicative of abnormal recharging of the first battery; and

## PATENT

a controller programmed to switchably enable the charging circuitry to produce the high voltage shocks, and to disable the second battery whenever an abnormal recharging current is detected;

wherein the controller is programmed to periodically recharge the first battery independent of the number of occurrences of the delivery of high voltage shocks.

37. (New) An Implantable cardiac rhythm device comprising:
- a sensing circuit configured to sense physiological cardiac events;
  - a pulse generator configured to deliver electrical stimulation energy to selected cardiac tissue upon the sensing of selected cardiac events, the pulse generator having storage capacitors that store the stimulation energy;
  - a Lithium Pentoxide (LP) battery coupled to the storage capacitors, the LP battery providing a charging current to charge the storage capacitors to preselected energy level;
  - a supply battery, switchably connected in parallel to the LP battery, having characteristics that enable the supply battery to recharge the LP battery; and
  - a recharging circuit coupled to the LP battery and configured to deliver recharging current to the LP battery;
- wherein a capacitor charge cycle defines a charge cycle time, and wherein the recharging circuit recharges the LP battery when a charge cycle time exceeds a preselected value.

## PATENT

38. (New) An implantable cardiac rhythm device comprising:  
a sensing circuit configured to sense physiological cardiac events;  
a pulse generator configured to deliver electrical stimulation energy to selected cardiac tissue upon the sensing of selected cardiac events, the pulse generator having storage capacitors that store the stimulation energy;  
a Lithium Pentoxide (LP) battery coupled to the storage capacitors, the LP battery providing a charging current to charge the storage capacitors to preselected energy level;  
a supply battery, switchably connected in parallel to the LP battery, having characteristics that enable the supply battery to recharge the LP battery; and  
a recharging circuit coupled to the LP battery and configured to deliver recharging current to the LP battery;  
wherein a capacitor charge cycle defines a charge cycle time, and wherein the recharging circuit periodically recharges the LP battery independent of the number of occurrences of the delivery of electrical stimulation energy.
39. (New) A method to deliver stimulation energy to selected cardiac tissue with an implantable cardiac stimulation device, comprising:  
sensing physiological cardiac events;  
charging storage capacitors with a Lithium Pentoxide (LP) battery, the storage capacitors storing electrical stimulation energy;  
delivering the electrical stimulation energy to selected cardiac tissue upon the sensing of physiological cardiac events; and  
switchably connecting a supply battery to the LP battery to enable the supply battery to recharge the LP battery when voltage across the LP battery falls below a predetermined minimum value.
40. (New) The method of claim 39 wherein the LP battery is a Lithium Silver Vanadium Oxide (SVO) battery.

## PATENT

41. (New) The method of claim 39 wherein the LP battery has a stored energy density and the supply battery has a stored energy density greater than that of the LP battery.

42. (New) The method of claim 39 wherein the supply battery comprises Lithium Carbon Monofluoride (CFx).

43. (New) A method to deliver stimulation energy to selected cardiac tissue with an implantable cardiac stimulation device, comprising:  
sensing physiological cardiac events;  
charging a storage capacitor with a Lithium Pentoxide (LP) battery to store electrical stimulation energy, the LP battery charging the storage capacitor in a capacitor charge cycle;  
delivering the electrical stimulation energy to selected cardiac tissue upon the sensing of physiological cardiac events; and  
switchably connecting a supply battery to the LP battery to enable the supply battery to recharge the LP battery when the charge cycle time exceeds a preselected value.

44. (New) The method of claim 43 wherein the LP battery is a Lithium Silver Vanadium Oxide (SVO) battery.

45. (New) The method of claim 43 wherein the LP battery has a stored energy density and the supply battery has a stored energy density greater than that of the LP battery.

46. (New) The method of claim 43 wherein the supply battery comprises Lithium Carbon Monofluoride (CFx).

## PATENT

47. (New) A method to deliver stimulation energy to selected cardiac tissue with an implantable cardiac stimulation device, comprising:
- sensing physiological cardiac events;
  - charging storage capacitors with a Lithium Pentoxide (LP) battery to store electrical stimulation energy;
  - delivering the electrical stimulation energy to selected cardiac tissue upon the sensing of physiological cardiac events; and
  - switchably connecting a supply battery to the LP battery to enable the supply battery to recharge the LP battery independent of the number of occurrences of delivering the electrical stimulation energy.
48. (New) The method of claim 47 wherein the LP battery is a Lithium Silver Vanadium Oxide (SVO) battery.
49. (New) The method of claim 47 wherein the LP battery has a stored energy density and the supply battery has a stored energy density greater than that of the LP battery.
50. (New) The method of claim 47 wherein the supply battery comprises Lithium Carbon Monofluoride (CFx).

## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ BLACK BORDERS
- ☐ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES
- ☐ FADED TEXT OR DRAWING
- ☐ BLURRED OR ILLEGIBLE TEXT OR DRAWING
- ☐ SKEWED/SLANTED IMAGES
- ☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS
- ☐ GRAY SCALE DOCUMENTS
- ☒ LINES OR MARKS ON ORIGINAL DOCUMENT
- ☐ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY
- ☐ OTHER: \_\_\_\_\_

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.**
